

What's New in Report Builder 6.3

Prompt for Query Condition Values

Define query condition values as "prompt for", specify a custom prompt text that will be displayed when a user executes the query/report.

When the query is executed Report Builder prompts for the value. All prompt condition values are displayed in a grid control. The user can easily provide his desired values for the query, without changing the query itself.

More Features of Report Builder 6.3

- When designing a Report Builder report a new red triangle indicates when conditional display is defined for an object.
- The Report Builder clipboard size has been increased.
- Watermarks can be passed through an input variable. And conditional display for watermarks is available.
