

UPD622.1-42038
 =====

Platform : Win32 /NET
 Product : Team Developer 6.2.2 Build 42038, ProfUIS build 1006
 .NET assemblies File version patched: 6.2.2 Build 42038

Release Notes

For the installer to work the .NET Framework 3.5 must be installed on the machine.
 To install via setup wizard simply double-click the MSI file included in this UPDATE and follow the steps indicated in the wizard.

Important: to prevent any issues with this UPDATE setup on Vista, windows 7, Windows 2008 and windows 8 we strongly recommend running this UPDATE MSI installer from an elevated command prompt instead of using the method above.
 To achieve that, simply open a command prompt using "Run as Administrator" and type the UPDATE MSI name to execute the installer.

The path of Team Developer installation is no longer detected by the UPDATE setup.
 Please navigate to your TD or DEPLOY install directory path in the SETUP user interface or use the SILENT mode install described below.

- If you only need to update the WIN32 design time environment, unselect the .NET checkbox in the installer.
- If you only need to update a deployment installation, select "Run Time" via wizard and browse to your deployment path.

A backup copy of TD 6.2 SP2 will be created in the 6.2 SP2 installation directory during the UPDATE setup, into a sub-folder called "PRE-UPD-BKP". Please do not remove this directory. Uninstalling the UPDATE will set back the environment to 6.2 SP2 RTM.

The MSI file included in this package only allows one UPDATE for Team Developer 6.2 SP2 release to be installed on the machine at one time, despite its service pack version. For instance, if you installed a Team Developer 6.2 UPDATE for a previous Service Pack and now want to install another UPDATE for a newer Service Pack, you must remove the current UPDATE before installing the new one. Otherwise you will receive an error.
 Check for any other Team Developer 6.2 UPDATE installed on the machine and remove it using "Add/Remove Programs in Control Panel" before installing this build.

The UPDATE installer now supports silent install for the design time and runtime (deploy) environments:

To install/uninstall Team Developer design time UPDATE:

```
msiexec /i UPD622.1-42038.msi INSTALLDIR="C:\YOUR_TD_INSTALLDIR" IDE="1" /qn
msiexec /x UPD622.1-42038.msi INSTALLDIR="C:\YOUR_TD_INSTALLDIR" IDE="1" /qn
```

To install/uninstall Team Developer runtime UPDATE:

```
msiexec /i UPD622.1-42038.msi INSTALLDIR="C:\YOUR_DEPLOYDIR" IDE="0" /qn
msiexec /x UPD622.1-42038.msi INSTALLDIR="C:\YOUR_DEPLOYDIR" IDE="0" /qn
```

The UPDATE setup provides:

Fixes/enhancements included in this UPDATE:

TD-17051: Message box are not sizing correctly

README_UPD622.1-42038.TXT

TD-20532: When printing to a PDF, it produces unnecessary spacing
TD-20568: When an application runs in a loop there is no way to stop the execution
TD-20655: SalTreeSetItemImageFromResource leaks memory
TD-20687: SalCenterWindow() does not work when called in XBAP Browser mode
TD-20703: When grid has multiline field enter takes the user to the next line within the multiline field
TD-20733: MDI child does not receive WM_SYSCOMMAND
TD-20741: Message box created from a MDI stays always on top of all other applications loaded
TD-20756: File cannot be dropped on a picture control on a toolbar
TD-20777: Using SalHideWindow on a datafield in a dialog (not a form) triggers a paint message on all screen objects on desktop
TD-20836: Displaying a message seems to move the context row to the last row selected
TD-20839: Wrong width of the image in PDF file
TD-20845: Repeating x axis values causing problem with the graph
TD-20890: WPF Desktop and Browser crash when pressing the "Alt" key when using the Ribbon Bar
TD-20891: Creating a PDF prints images incorrectly
TD-20892: A PDF file size is much larger with TD6.2 than with TD6.1
TD-20905: DATE/TIME picker bad button alignment to parent in specific scenario
TD-20915: TabBar theme "whidbey" different header color
TD-20926: Context menu created using windows API stays on even after a modal dialog is displayed
TD-20928: Quick Graph Crash in specific condition due to Null reference exception
TD-20938: IDE: debugging returning incorrect function values
TD-20960: Double clicking caption bar of MDI child window set to maximize='no' would maximize the window
TD-20967: VT.APL cCalendar acting buggy when GetFocusDate and SetFocusDate functions are called
TD-21018: SalMessageBox only displays OK button irrespective of the value used in the third parameter
TD-21032: Repeating items in a loop iterating all children of a parent form with Quick Tabs

Fixes/enhancements also included in the superseded UPDATE:

IMPORTANT

This is an UPDATE for Team Developer 6.2 SP2 RTM since the release Build 41010. It must only be used with Team Developer 6.2 SP2 Build 41010.

Although updates undergo full QA testing as done for regular releases and Service Packs, we strongly recommend performing your own regression tests before deploying applications using this Team Developer UPDATE.
