

UPD616.1-44871
 =====

Platform : Win32 /NET
 Product : Team Developer 6.1.6 Build 44871, ProfUIS build 1170
 .NET assemblies File version patched: 6.1.6 Build 44871

Release Notes

For the installer to work the .NET Framework 3.5 must be installed on the machine.
 To install via setup wizard simply double-click the MSI file included in this UPDATE and follow the steps indicated in the wizard.

Important: to prevent any issues with this UPDATE setup on Vista, Windows 7, Windows 2008 and Windows 8 we strongly recommend running this UPDATE MSI installer from an elevated command prompt instead of using the method above.
 To achieve that, simply open a command prompt using "Run as Administrator" and type the UPDATE MSI name to execute the installer.

The path of Team Developer installation is no longer detected by the UPDATE setup.
 Please navigate to your TD or DEPLOY install directory path in the SETUP user interface or use the SILENT mode install described below.

- If you only need to update the WIN32 design time environment, unselect the .NET checkbox in the installer.
- If you only need to update a deployment installation, select "Run Time" via wizard and browse to your deployment path.

A backup copy of TD 6.1 SP6 will be created in the 6.1 SP6 installation directory during the UPDATE setup, into a sub-folder called "PRE-UPD-BKP". Please do not remove this directory. Uninstalling the UPDATE will set back the environment to 6.1 SP6 RTM.

The MSI file included in this package only allows one UPDATE for Team Developer 6.1 SP6 release to be installed on the machine at one time, despite its service pack version. For instance, if you installed a Team Developer 6.1 UPDATE for a previous Service Pack and now want to install another UPDATE for a newer Service Pack, you must remove the current UPDATE before installing the new one. Otherwise you will receive an error.
 Check for any other Team Developer 6.1 UPDATE installed on the machine and remove it using "Add/Remove Programs in Control Panel" before installing this build.

The UPDATE installer now supports silent install for the design time and runtime (deploy) environments:

To install/uninstall Team Developer design time UPDATE:

```
msiexec /i UPD616.1-44871.msi INSTALLDIR="C:\YOUR_TD_INSTALLDIR" IDE="1" /qn
msiexec /x UPD616.1-44871.msi INSTALLDIR="C:\YOUR_TD_INSTALLDIR" IDE="1" /qn
```

To install/uninstall Team Developer runtime UPDATE:

```
msiexec /i UPD616.1-44871.msi INSTALLDIR="C:\YOUR_DEPLOYDIR" IDE="0" /qn
msiexec /x UPD616.1-44871.msi INSTALLDIR="C:\YOUR_DEPLOYDIR" IDE="0" /qn
```

The UPDATE setup provides:

Fixes/enhancements included in this UPDATE:

 TD-18059: TAB BAR Page Image: In design-time TD does not find/display a page

README_UPD616.1-44871.TXT

image even if image in a folder listed in Preferences/Directories App Path
TD-18239: Problem with multiple monitors when the TD IDE is placed on monitor 2.
The find and replace dialog (CTRL-F) splits between the screens
TD-19100: Unable to control the column width during SalGridPrintPreview()
TD-19126: Team Developer IDE disables KAXAML when the Build Type is: .NET SAL
Library (DLL)
TD-20530: Input mask influences setting MyValue
TD-20882: Couple of IDE rendering issues
TD-21143: Display setting change changes the number of detail rows displayed
TD-21376: JP LOCALE user input in a GRID cell does not honor
bMaxDataLengthInBytes / Max DataLength property
TD-21500: WM_MenuSelect isn't send to a form when submenu is closed
TD-21586: Popupmenu close behavior difference between executable and debugmode
TD-21798: Problem with option buttons on tabs
TD-21830: Maximizing and then minimizing the mdi child creates vertical scroll
unnecessarily
TD-21912: Grid Column CheckBox Issue
TD-21931: Crash in qwaxtest from Samples.
TD-21988: Print includes extra characters at the end
TD-22004: CLONE - .NET WPF - If a datafield is disabled with SalDisableWindow
the datafield's background color changes as well

Fixes/enhancements also included in the superseded UPDATE:

IMPORTANT

This is an update for Team Developer 6.1 SP6 RTM
since the release Build 43820. It must only be used with
Team Developer 6.1 SP6 Build 43820.

Although updates undergo full QA testing as done
for regular releases and Service Packs, we strongly recommend performing your
own
regression tests before deploying applications using this Team Developer update.
