SQLBase Roadmap

SQLBase 12.1
October 2017

VSS enabled volume backups
new SQLTalk Plus SQL tool
limit clause and @format
function

SQLBase 12.2
Q2 2019

SQLTalk Plus enhancements:
auditing, task scheduling
easier access to server stats and
administration of running servers
.NET Core driver
new SQL features
new server console

Past

Future

SQLBase 12.2

- Enhanced SQLTalk Plus for easy
  server and user administration
  - Database auditing
  - Scheduled tasks via Windows scheduler
  - Simple access to server, database and user
    statistics and related actions

- SQL language enhancements
  - limit statement with offset to allow scrolling
    from page to page using SQL
  - Function to tell if a string is a numeric value
  - @substr works with clob/blob

- .NET Core Database Driver
  - Interface to SQLBase from Linux, MAC and
    Window using .NET Core

- New server console
  - Easier access to server console data
  - Easier multi-server configuration, no
    console IP port required anymore
  - Integrated into SQLTalk Plus

Team Developer Roadmap

Team Developer 7.1
May 2018

application multithreading
external source code
management
custom theme
WPF controls for Win32/Win64

Team Developer 7.2
Q2 2019

code diagnostics and analytics
low code REST
REST authentication
Windows notifications
user requested UX
enhancements

Past

Future

Team Developer 7.2

- Code analytics
  - Code logging
- Low code REST, generate UDVs from URL or JSON
- Improved REST security for OAUTH etc.
- Search & replace with regular expressions
- Debug with app parameters
- Command interface for source interactions

- Report Designer in Report Builder
- Windows notifications
- Pass UDV from thread to main app
- Ribbon tab receive click message
- Retrieve selected ribbon tab name
- Tab message after change
- SalIsTabWindowActivated()
- Custom sort order in grid column chooser
- Grid override selected row colors
